

Advanced software-based seRvice provisioning and migraTIon of legacy SofTware

For the businesses that are stacked with ages-old legacy software applications, ARTIST offers a set of methods and tools which provide an end-to-end and assisted migration service of legacy applications to a new target platform, allowing their deployment in the cloud.

Unlike existing solutions that allow partially the migration process, but raise barriers when it comes to cost and complexity, ARTIST proposes a migration approach based on Model Driven Engineering techniques, covering the pre-analysis of migration feasibility and the post-certification of migrated solution.

Subsequently, ARTIST forms a business investment and leads to lower costs and uncertainty, improved performance, greater customer satisfaction, more innovation and greater competitiveness.
